Rick,

I wanted to touch base with you and say thanks again for your help with my questions regarding a map of the area EPA is focusing for the watershed assessment. Attached is the Pebble Watch newsletter that came out in July. All of our newsletters are available on www.PebbleWatch.com. If you'd like a printed copy, please let me know of a good address for you and I'd be happy to send you one.

Thanks again for being so willing to help me with my query. I look forward to talking with you again!

Alison,

I received information that the southwestern most portion of the HUC is not covered on the map because that portion borders Nushagak Bay but not the river. The chances that any of those rivers west of Wood River that flow directly into the bay would be adversely affected by activity in the Nushagak drainage is very low.

Subject: EPA scientific assessment map - quick question

Hi Rick,

It was nice to meet you yesterday, and thanks again for providing the map of where EPA will be conducting their assessment. Our GIS specialist is reproducing the map for our newsletter, and he mentioned that the drainage outlines follow the HUCs except for the bottom left area (I've marked it on the map attached to this email).

I wanted to make sure that EPA's assessment didn't include this area

before I told him to deviate from the HUC boundaries. I'm sure you are very busy but it would be great if you could get back to me soon, as I want to make sure our map is as accurate as possible before we publish the newsletter.

Thank you very much for your help!
